

Definition of Restorative Potentialⁱ

Restorative Potential means that there is reason to believe (based on clinical assessment and expertise and evidence in the literature where available) that the patient's/client's condition is likely to undergo functional improvement and benefit from rehabilitative care. The degree of restorative potential and benefit from the rehabilitative care should take into consideration the patient's/client's:

- Premorbid level of functioning
- Medical diagnosis/prognosis and co-morbidities (i.e., is there a maximum level of functioning that can be expected owing to the medical diagnosis /prognosis?)
- Ability to participate in and benefit from rehabilitative care within the context of the patient's/client's specific functional goals and direction of care needs.

Note: Determination of whether a patient/client has restorative potential includes consideration of all three of the above factors. Cognitive impairment, depression, delirium or discharge destination should not be used in isolation to influence a determination of restorative potential.
